Projects and Work Experiences

- 2017 - May 2018  Relay TCP over wireless network with free-space optical and worldwide interoperability for microwave access.
under the supervision of Mr. Subhasis Banerjee, Visva-Bharati, India.
- Jan - Jun 2020  SatG: a path planner for robots in a 2D grid.
Under the supervision of Dr. Ansuman Banerjee, ISI Kolkata, India.
SatG is developed based on SAT-based graph encoding. It handles multiple robot configurations. At the same time, SATG generates SMT-LIB2 constraints for obtaining a plan.
- May - Dec 2022  Building neural network models of the standard Cyber-Physical Systems (CPS) benchmarks.
Under the supervision of Dr. Rajarshi Ray, IACS Kolkata, India.
Building Feed-forward Neural Networks (FNNs) for CPS benchmarks such as hybrid automata and Simulink models. These models are the approximation of the original models and can be useful in developing the application of such systems. We built FNN models for such systems with non-deterministic behavior and time-varying input signal.
